

Curated list of Xporter Templates

This page contains a curated list of Xporter templates that are available on the (free) template store. Many more templates are available for download though, so please consider these as mere examples.

The template store can be accessed right from Xporter administration under the [Templates section](#), or also from a given [project settings page](#), from where it's possible to install a template.

Each of the following pages details the purpose of a given template, what information will be present in the generated report, and its layout.

Please note

There's also a [template store public site](#) where it is possible to browse, search for templates, and download them for further customization; if you use this page to download, and eventually customize a template, then you'll need to go to Xporter settings (either global or at project level) and manually upload your customized template.

If you use this site, the templates for Xporter are available using under the "**Jira 7**" or "**Jira 8**" platforms. Newer versions of Jira, can use the templates under Jira 8.
