

Why project organization is important?

In Jira, all information is organized into projects that contain issues from different types.

Because Xray uses issue types for mapping test concepts, you can organize your projects to best suit your organizational needs.

Selecting the best Project Organization will help your team get the most of Xray, as well as let you analyze results and check information in a more efficient way.

The project organization strategy should reflect:

- Team organization
- Security requirements
- Compliance requirements

When you use different projects to manage your issues you can have a specific configuration for:

- Issue Types
- Screens
- Workflows
- Permissions
- Notifications

This flexibility enables you to use Xray in different scenarios taking into account your needs and requirements.
