

Setting a workflow for Test Plans

1

Design the Test Plan Workflow

Go to **Jira Administration > Issues > Workflow** and design the workflow.

Here is a simple example that can be used as a Test Workflow.

If you already have a workflow similar to this one, you can use it. No need to create a new one!

This is just an example. Implement a workflow that is adapted to your own needs.

Recommendations

- Have an initial status (e.g., "new"), another when it's in progress (e.g., "in progress"), and then another when it's finished (e.g., "closed").
- You may need to have an interim status if you need to review the results of a Test Plan.

2

Update the Workflow Scheme

After designing the workflow you need to make it active for your project, you do that by updating the workflow scheme.

Go to your **Project > Project settings > Workflows** and click "Add Workflow."

Workflows

A workflow defines which statuses and transitions an issue type can use within a project.

The workflow scheme defines which workflow applies to each issue type in this project. To change the workflow scheme used, you can select a different scheme, or modify the current scheme.

Add Workflow ▾

Add Existing

Choose From Marketplace

Then select the workflow and mapped it with the issue type Test Plan:

XRAY Test Plan Workflow View as: [Text](#) [Diagram](#)

 Test Plan 

Don't forget to publish the scheme after updating!
