What is the Xray Exploratory App

The Xray Exploratory App (XEA) is desktop-based Exploratory Testing Tool that works seamlessly integrated with Xray for Jira. It allows users to define exploratory testing sessions, record videos, capture and annotate screenshots, take notes and much more. It works integrated with Jira and Xray, but can also be used in a standalone mode (Jira and Xray are not required).

With the Xray Exploratory App you can create tests, run test executions and explore software testing like never before.

The app is available for Windows and macOS. You can download the app [here](#).

How to execute a new session inside Xray

Compatible Test Issues

You can only start a new session in *Xray Exploratory App* in the context of Test issue with a Generic Test definition.

You can find the "Exploratory App" button in:

- The "Execute In" inside an Xray Test Issue - This option will allow you to create a **new Test Execution** Issue for your session.

Enable/Disable Xray Exploratory App options in Xray

You can enable or disable the options mentioned in the previous section, by going to the Administration page Xray Miscellaneous.

Xray Exploratory App

- ☒ Enable Xray Exploratory App execution links

When this option is enabled, you'll be able to start an execution using the Xray Exploratory App directly from a Test Run.
