

# [Xray Server] How to import a large Execution Results file manually through the UI

## Go to [Jira Administration System Advanced - Attachments](#)

In that menu, increase the limit value to upload attachments, according to the size of attachment that is being uploaded

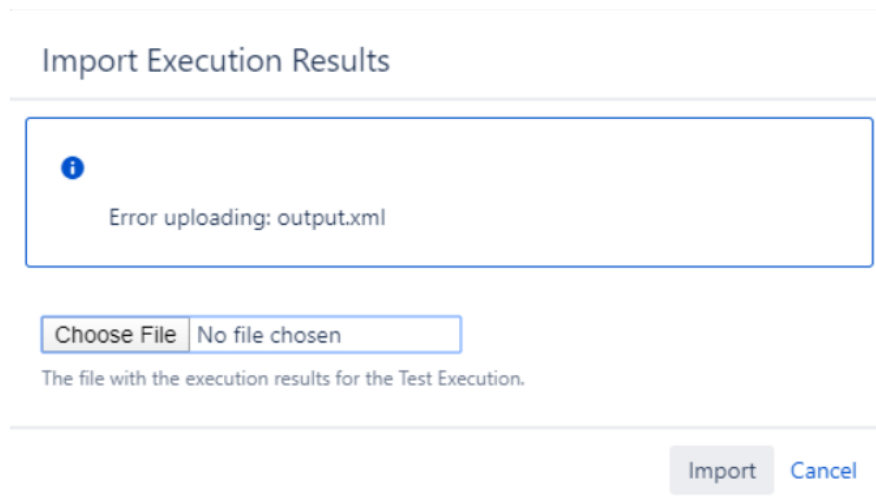

Example:

The screenshot shows the Jira Administration interface. The left sidebar contains a list of administration categories: General configuration, SYSTEM SUPPORT, Instrumentation, Integrity checker, Scheduler details, Troubleshooting and support tools, Audit Log, SECURITY, Project roles, and Global permissions. The main content area is titled 'Attachments' and includes an 'Edit Settings' button. Below this, there is a table of settings:

Setting	Value
Allow Attachments	ON
Attachment Path	Default Directory [/var/atlassian/jira/data/attachments]
Attachment Size	10.00 MB
Enable Thumbnails	ON
Enable ZIP support	ON

If the size of the Execution Results file is higher than the limit value configured, when importing the Execution Results file the following error is shown:

The screenshot shows the 'Import Execution Results' dialog box. It features an information icon and an error message: 'Error uploading: output.xml'. Below the error message is a file selection area with a 'Choose File' button and 'No file chosen' text. At the bottom are 'Import' and 'Cancel' buttons.

**Important note:** Increasing this value may lead you with timeout issues.

*This is not related to the Xray REST API.*
