

Security Advisories

Publishing Policy

When a [critical severity](#) security vulnerability is discovered and resolved, we will inform customers through the following mechanisms:

- We will post a security advisory on [Security Advisories](#) at the same time as releasing a fix for the vulnerability.
- We will send an email copy of all critical security advisories to the technical contacts we have in our database.

If you want to track non-critical severity security vulnerabilities, you need to monitor the issue trackers for the relevant products on <https://jira.xpand-it.com/>, for example, <https://jira.xpand-it.com/browse/XRAY> for Xray for Jira Server and Data Center. Security issues are marked with security labels: security_vulnerability_critical, security_vulnerability_high, security_vulnerability_medium, security_vulnerability_low).

All security issues will be listed in the release notes of the release where they have been fixed, similar to other bugs.
