

[Xporter] How to export issues grouped by components

Exporting issues grouped by components is simple using the example below.
This example will also count the number of issues associated with each component.

```
 ${set(RepeatComponent, 0)}  
&{for issues}  
#{for components}  
#{if (%{'${RepeatComponent}'.indexOf('${Components[n].Name}') == -1}}}  
Component: ${Components[n].Name}  
${set(RepeatComponent, %{'${RepeatComponent}'.concat(['${Components[n].Name}'])}}}  
${jq|count: component = '${Components[n].Name}'}  
#{for m=JQLIssuesCount|clause=component = '${Components[n].Name}'}  
    • ${JQLIssues[m].Key} | ${JQLIssues[m].Summary}  
#{end}  
#{end}  
#{end}  
#{end}  
&{end}
```

Exported document:

Component: CompC
