

[Xray Server] Why I can't see Xray issue types in my project

Step-by-step guide

- 1 - Go to Jira Administration
- 2 - Go to Manage Apps
- 3 - Go to [Miscellaneous](#)
- 4 - Go to "User Groups allowed to add Xray Issue Types"
- 5 - And select the User Groups which are allowed to add Xray Issue Types to a project in the project settings
- 6 - Save
- 7 - Check if you have this option available in the Project settings > Actions:

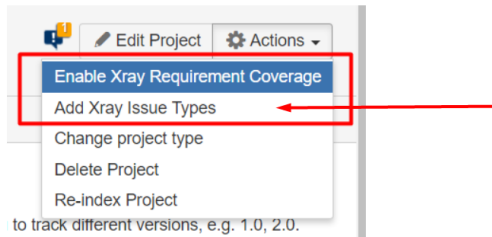

Enable Xray in your projects

You can enable Xray for your existing projects or create a new project with both standard and Xray issue types.

Enable testing in existing projects

For [existing projects](#), in the project Administration page, go to Actions at the top right-hand side. You can either:

- a) set your project as a Requirements project by choosing "Enable Xray Requirement Coverage", so the requirements are covered by tests; or
- b) add Xray issue types (i.e., Test, Test Set, Test Execution, Test Plan) to the project.
