

Xray 3.6.2 Release Notes

12 February 2020

The Xray team announces the bugfix release of **Xray 3.6.2**.

[Download the latest version](#)

Getting ready for Anonymizing users

Jira 8.7 offers the possibility of fully anonymizing users. A typical use case is a user that leaves the company and wants to be "forgotten" in the company system. You can read more [here](#).

Starting from v3.6.2, Xray will also support **Anonymizing user details**.

Xray displays user information on multiple screens. Some examples include:

- Test, Pre-Condition, Test Set, Test Execution or Test Plan's assignee
- Test Run execution screen
 - global information
 - assignee
 - executed by
 - activity log

As Xray uses and leverages Jira issue types for most of its entities, the anonymization of issue-level information is handled by Jira itself.

Test Runs are an exception as these entities are fully managed by Xray; at that level, anonymization is handled by Xray on the Test Run specific information (i.e. assignee) and related activity information.

Before anonymizing

The Test Execution screenshot ahead shows a valid user assigned to the Test Run; the user information is provided by Jira.

After anonymizing

After anonymization occurs, the previous user is replaced with an anonymized variant of it.
