

# Desktop Application Settings

You can manage the Desktop Application settings in File > App Settings. Here, you can:

- Manage the connections to Jira;
- Define the appearance of your app;
- Decide if you want to use audio in your video;
- Choose the quality of the video.

## Connections

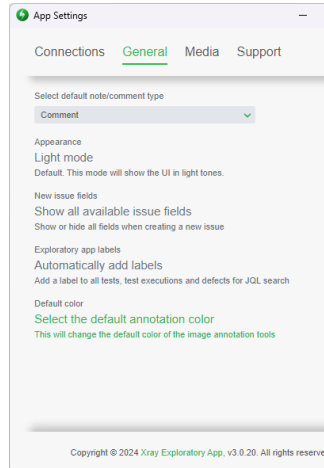

Here you can manage your connections to your Jira instances or decide if you want to use the app without a connection to Jira. You can switch between Jira instances even if it is Server or Cloud.

You can also select **File > Connections** to open this option in the Desktop App.

Whenever you want to make a new connection to a new Jira instance you can click on the option **Connect a Jira/Xray instance** and follow the steps described [here](#).

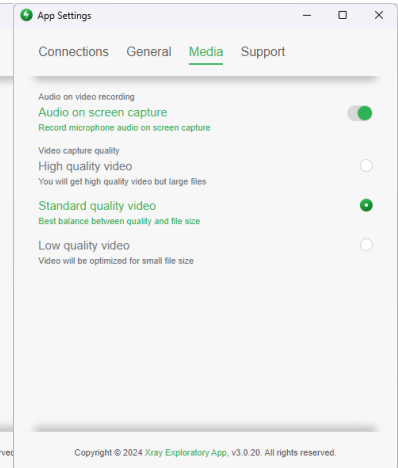

## General

Here you can manage the general settings of your app, for example:

- Select the default note type in your evidences;
- Define the appearance of the app;
- Show or hide all available issue fields;
- All labels to all tests, test executions and defects;
- Select the default annotation color.

## Media

Here you can decide if you want to record microphone audio on screen capture and the video capture quality.
