

# Sub-Test Execution

A Sub-Test Execution has exactly the same functionalities as the [Test Execution](#) issue type. The difference between them is that the Sub-Test Execution is a **sub-task** and can be created within the context of a **requirement**.

Creating a Test Execution as a sub-task of the requirement issue provides you the ability to track executions in the Agile board.

## Create Sub-Test Executions

To create a new Sub-Test Execution, click the **Create new Test Execution** button in the **Test Coverage** section in the **Requirement Issue View**:

XPack / XP-6

As a user, I can login into the app using Facebook authentication
