

Test Execution

A Test Execution is an issue type that aggregates a user-determined collection of Tests. It monitors and verifies if those Tests are working as expected in a target context and environment. The Overall Execution Status, updated as each test is performed, informs you about the progress of the Test Execution, including which tests passed, failed, are being executed or waiting to be performed.

An association between a Test Execution issue and a Test issue is called a **Test Run**. Hence, a Test Execution is a list of Test Runs.

A Test Execution issue can be assigned to a Tester. It is also possible to assign individual Test Runs to several Testers.

Sub Test Execution

You can create a Test Execution as a Sub-Task in the Requirement Issue View Page. Learn more [here](#).

Fields

A **Test Execution** has the following custom fields:

- **Begin Date** - the date the Test Execution is planned to start. This is a normal Jira custom field.
- **End Date** - the date the Test Execution is planned to end. This is a normal Jira custom field
- **Revision** - the current source code and documentation version used in the Test Execution. This is a normal Jira custom field.
- **Test Environments** - environments in which the Test Run is executed.

These custom fields are located in the right column (issue details).

Sections

Xray contributes an additional section to the Test Execution view issue screen.

Tests Section

The Tests section provides the following views:

Overall Execution Status

This view has a colored progress bar where you can clearly see the status of a Test Execution. Final statuses float to the left side; the last status color to appear is the TODO status.

It is possible to filter tests by status in Test Execution Progress Bar as shown in the image below:

Test Runs Table

This table has all the Test Runs created for the Test execution issue. Each row represents a Test Run and contains a set of actions that can be performed on a Test Run.

You can configure the Columns, perform bulk operations and change rank of Test Runs.

When Xray is installed, the default columns are: **Rank, Key, Summary, Test Type, Dataset, Status** and **Action**, where the **Status** is fixed and cannot be removed.

Create

To create a new Test Execution Issue,

Step 1: Click **Create** at the top of the screen to open the **Create Issue** dialog box / page or by pressing the key "C" on the keyboard.

Step 2: Select **Project** and on **Issue Type**, select Test Execution.

Step 3: Type a **Summary** for the test execution and fill all appropriate fields — mandatory fields are marked with an asterisk.

Step 4: In the **Create Issue** dialog you can populate the Test Execution custom fields provided by Xray, namely, the **Begin/End date** and the **Revision**.

Optional: To create a series of similar test executions – within the same **Project** – check **Create another** at the bottom of the dialog.

Step 5: When you are satisfied with the content of your test execution, click **Create**.

Step 5a: If you checked **Create another**, a new **Create Issue** dialog appears. This issue is automatically pre-populated with your previous test execution details, with the **Summary** field blank.

Step 3: Modify your Test Execution details in the appropriate fields.

Step 4: Click out of the edit field to save it.

Clone

When cloning a Test Execution issue, all the Test issue associations will also be cloned. However, a new Test Run is created for each Test so that the new Test Execution issue has no execution state.

Test Environment associations will be cloned as well.

After this, an additional dialog will be shown.

A screenshot of a Jira dialog box titled 'Clone issue: STORE-45'. The dialog has a white background and a dark gray border. It contains a 'Summary' section with a text input field containing 'CLONE -Iteration 1 - TP v1.0'. Below this is an 'Include' section with a checkbox labeled 'Links'. At the bottom right, there are two buttons: 'Cancel' and 'Clone'.

And after the issue is created, its page will be opened.

On some occasions the cloned issue page may open before the Xray information is actually cloned and as a result the new Test Execution will appear empty.

When this happens the following information will be shown:

Test Status for the following scopes.

Adding Tests

Tests and Test Sets can be associated with Test Execution issues.

- [Add Tests](#)
- [Add Tests from Test Sets](#)

Add Tests

To add Test issues to a Test Execution:

Step 1: Open the Test Execution you wish to associate a Test with.

Step 2: Select **Add Tests > Existing Tests** (under the **Tests** section on the view page) to open the **Add Tests** dialog box.

Tests

Step 4: Click **Add Selected**.

Add Tests from Test Sets

When adding a Test Set issue to a Test Execution, all the Test issues associated with that Test Set are added to the Test Execution. The Test Set issue is not directly associated with the Test Execution, so changes to the Test Set after it was added will not affect the Test Execution.

Step 1: Open the Test Execution with which you want to associate a Test Set.

Step 2: Select **Add Tests> Tests from Test Sets** (under the **Tests** tab on the view page) to open the **Add Test Sets** dialog box.

Assigning Work

There are two ways to distribute work between Testers.

- A Test Execution issue can be created per Tester by assigning the issue to a specific Tester, or
- Within a Test Execution issue, you can assign individual Test Runs to Testers. Test Runs are assigned to the Test Execution issue assignee by default. Only users with permission to assign the Test Execution issue can assign Test Runs.

To assign individual Test Runs to testers,

Step 1: Open the Test Execution issue.

Step 2: Hover over the desired Test Run (under the **Tests** section on the view page)

Step 3: Click the **Actions** button that appears in the last column. The actions menu should pop up with the available actions.

Step 4: Click the **Assign** action. The assign dialog appears.

Step 5: Start typing to find the user to assign the Test Run. Click **Assign** to complete the action or **Cancel** to abort it.

Assign Test Run

Assign Cancel

After assigning a Test Run, an email notification is sent to the new assignee if the corresponding setting is enabled in the [Global](#) or [Project Settings](#).

Change Test Run Rank

There are two ways to change the rank of a Test Run:

Drag-and-Drop

Step 1: Open the Test Execution issue.

Step 2: Hover over the desired Test Run row (under the **Tests** section on the view page) and the drag handle column.

Step 3: Click the drag handle and move the Test Run up or down in the current page.

Change Rank Action

This action allows users to change the Rank of a Test run between pages.

Step 1: Open the Test Execution issue.

Step 2: Hover over the desired Test Run (under the **Tests** section on the view page)

Step 3: Click the **Actions** button that appears in the last column. The actions menu should pop up with the available actions.

Step 4: Click the **Change Rank** action. The change rank dialog appears.

Step 5: Enter the desired index number (1-based) and click **OK**.

Change Rank of Test STORE-27

Enter a new rank *

Apply

Cancel

Execute Test

To execute a Test from a Test Execution:

Step 1: Open the Test Execution you want to run.

Step 2: Hover over the desired Test Run (under the **Tests** section on the view page)

Step 3: Click the **Execute** button that appears in the last column; it will open the **Execution** page.

Filters

10

Columns

Rank	Key	Summary	Test Type	Dataset	Status	Actions
☐	1	STORE-37	Manual test of password reset procedure	Manual	EXECUTING	

You can see a detailed explanation of the execution screen [here](#).

Note: If you do not have permission to execute the Test Run, the **Run** option will not be available.

Execute Test Inline

To execute Test Runs inline from the **Test Execution** view screen, this option must be enabled in the Xray administration page. The option to set the Test Run status manually without having to execute all Test Steps (or Examples, in the case of Cucumber Tests) must also be enabled in the Xray administration page.

If the above options are enabled and you have permission to execute the Test, the context menu for executing Test Runs, accessed by the **Gear** button on each Test, will show the available transitions.

When executing inline Tests, the status of the manual steps (or Examples, in the case of Cucumber Tests) can be changed automatically. The following rules are applied:

- **PASS**: All step statuses will be changed to PASS independent of their current status.
- **FAIL**: All step statuses will remain unchanged, even if they are all PASS. This is because a Test might fail due to a Precondition.
- **TODO**: All step statuses will be changed to TODO.
- **EXECUTING**: The Test Execution status will be changed to EXECUTING.
- **CUSTOM**: The Test Execution status will be changed to the specified custom status.

To execute a Test Run inline:

- Step 1:** Open the Test Execution issue you want to run.
- Step 2:** Click on the status field located in the **Status** column of the **Test Runs** table and select one of the available statuses.

Status	Actions
FAILED	...
PASSED TO DO EXECUTING	Total 1 issues

View Test Run Details

You can always view and modify the Test Run details after execution. If you do not have permission to execute the Test Run, you can still view the execution details in read-only mode, provided you have permission to browse the Test Execution issue.

To view the execution details from a Test Run:

- Step 1:** Open the Test Execution you want to view.
- Step 2:** Hover over the desired Test Run (under the **Tests** section on the view page).
- Step 3:** Click the **Execute** button that appears in the last column; it will open the **Execution** page where you can view the details.

3	STORE-38	Manual test of strong password validation	Manual	FAILED	...
Prev	1	Next	Total 3 issues		

Bulk Operations

Xray provides the following bulk operations on the Test Runs table.

- **Assign** - Assigns all the selected Test Runs to a particular user.
- **Change Rank** - Changes the Rank of a Test Run between pages.
- **Delete** - Deletes all the selected Test Runs.

To execute these bulk actions:

Step 1: Open the Test Execution issue.

Step 2: Select the desired Test Runs. This can be done by using the checkbox that appears on each Test Run row or by using the Bulk dropdown button options to select all Test Runs or the ones on the current page.

Columns of the respective Test issue of each Test Run can be added.
Xray specific fields from the Test are also available, such as:

- **Test Type:** The Test Type of the Test Runs' Test
- **Definition:** The definition of the unstructured Test of the Test Run (if the Test Run's Test is of another kind other than unstructured, no value will be shown)

In addition, it's possible to add Test Run specific columns.
The following columns can be added:

- **Test Run Assignee:** Assignee of the Test Run
- **Test Run Comment:** Comment in the Test Run
- **Test Run Executed By:** User that executed the Test Run
- **Test Run Started:** Start date of the Test Run
- **Test Run Finished:** Finish date of the Test Run
- **Test Run Progress:** Status progress of the Test Run Steps or Iterations

Test Run custom fields can also be added, they are prefixed by "TestRun", so, for example, a Test Run custom field named "User", can be found under the name "TestRun User".

More info in [Test Runs](#).

Export to Cucumber

Cucumber Test Executions in Jira can be exported as .feature files ready to be executed in Cucumber. The generated .feature files follow the rules defined in [Export Rules](#) and take into account the context of the Jira Test Execution issue.

A single Cucumber **feature** file should be generated and prompted to be downloaded for the Cucumber Test contained on the Test Execution, unless the target Test Execution contains multiple Cucumber Tests or the Cucumber Test is associated with multiple **Requirements**. In this case, a **FeatureBundle** zip file will be generated containing a single Cucumber feature file for every Requirement associated with the target Cucumber Test contained on the Test Execution.

To export a Test Execution issue containing Cucumber Tests to .feature files,

Step 1: Open the Test Execution issue view page.

Step 2: Select ... > **Xray - Export to Cucumber**. The file will be downloaded from the browser.

Import Automated Test Results

Importing from Test Execution view issue screen

Automated Test results can be imported back to Jira using the Test Execution view issue screen. The Test results can be imported from JSON/XML external files that must follow an [Import Results](#) specific scheme.

When importing results, only the Tests contained in the intersection between the Tests in the JSON/XML file and the Tests in the selected Test Execution are updated; all others, if any, are ignored. After importing, a new entry with the result of the operation is registered in the Activity Log of the Test Run.

To import Automated Test results to a Test Execution issue containing automated Tests,

Step 1: Open the Test Execution issue view page.

Step 2: Select ... > Xray - Import Execution Results. The Import Execution Results dialog will open.

Test 1 of 3

Dataset Import Execution Results

Step 3: Click the **Choose file** button to navigate the local disk and select the JSON/XML/ZIP file with the automated execution results for the Test Execution.

The screenshot shows a dialog box titled "Import Execution Results". Inside the dialog, there is a button labeled "Choose file" followed by the text "No file chosen". Below this, it says "The file with the execution results for the Test Execution.". At the bottom right of the dialog, there are two buttons: "Submit" and "Cancel".

Step 4: Click **Submit**.

Archive Test Runs

Xray provides you with a way to explicitly archive test runs one at a time or in bulk as well as way to check all the archived test runs for a specific test execution. For more information about Test Run Archive check [here](#).

Archive a Single Test Run

To archive a single Test Run,

Step 1: Click on the ... at the end of the row that contains the test run you wish to archive.

Step 2: Click on the **Archive** option that appears.

Step 3: Click the **Archive** button on the confirmation dialog.
