Global Settings: API Keys

In this page, the administrator can manage API keys that can be used in order to interact with Xray using its REST API.

An API key may be created for each Jira user. Each API key contains a Client Id and a Client Secret which can be used during the authentication phase.

From thereon, authenticated REST API requests will be done in behalf of the user linked to the API key being used

API Keys			

- Single operations
 - Create an API Key

 - Delete an API Key
 Regenerate Client Secret
- Bulk operations
 - Select API Keys
 - Delete API Keys
 - Regenerate Client Secret

Single operations

1. Click the Create API Key button. API Kevs

			Create API Key
•		10 🗸	Search
User Key :	Client Id	Client Secret	Actions
	No API Keys wer	e found	

2. Select the user and click Generate.

Γ	Create API Key
	User
У	Sergio Freire 🗸
	Generate

3. If no API Key already exists for that user, a new API Key will be created and linked to that user. A Client Id and a Client Secret will be generated, which can then be used for authentication purposes.
