

[Xporter] Convert milliseconds to duration (days, hours, minutes and seconds)

Problem

Usually when exporting time duration information this comes in milliseconds. Here you will find a simple formula using javascript, to convert milliseconds into days, hours, minutes, and seconds.

Solution

This follow notation has javascript embedded.

```
%{var seconds = Math.floor(${MTRS} / 1000);  
    var minute = Math.floor(seconds / 60);  
    seconds = seconds % 60;  
    var hour = Math.floor(minute / 60);  
    minute = minute % 60; var day = Math.floor(hour / 24);  
    hour = hour % 24; day + " days " + hour + " hours " + minute + " minute " + seconds + " seconds"}
```
