[Xporter Server] Does it export any custom fields?

Xporter exports all standard JIRA custom fields and also integrates with several other add-ons, like the ones described in the integrations documentation.

What if my Add-on's custom field is not found in the integration list?

The integration list is a list of Add-ons that we guarantee that we have an specially made integration.

In case your Add-on is not found in the list, Xporter can still integrate out of the box with your Add-on's custom fields, to be sure just make the small test below.

Step-by-step guide to test the custom field:

1. Create a template.
2. Place a reference to your custom field name like this: ${CUSTOM_FIELD_NAME}
3. Test the template.
4. Check the result.

ⓘ   Sometimes the returned result has the information but it is not properly formatted. In this case, it is possible to format the result using Javascript
