

[Xray] Testing Framework support recommendation

Xray can integrate with the Tools described in our [integration documentation](#).

In case the tool is not found in the list, it still can integrate if it provides output reports in the JUnit XML format or to NUnit XML report format.

Please check our documentation about [Integrating with testing frameworks](#) for further details.

Please find some examples about testing using:

- [JUnit](#)
- [TestNG](#)
- [NUnit](#)
- [xUnit](#)
- [Robot Framework](#)

And you can also use Xray's REST API to import execution results, please check the endpoints and input formats here: [Import Execution Results - REST](#).
