

[Xray Server] Why I can't see my issue type as a Requirement (with Test Coverage and linked Tests)?

Possible Causes

Have you created a different issue type to use it as a Requirement, but you can not see why it is not taking this behavior?

Correct

The screenshot shows a Jira issue page for 'PMAX_XRAY / PMAXR-69' titled 'This is a Requirement - Story'. The issue is of type 'Story' with a 'Low' priority. The 'Requirement Status' is 'UNCOVERED', which is highlighted with a red box. The 'Test Coverage' section, also highlighted with a red box, shows 'No Tests were found testing the requirement.' and an 'Add Tests' button. The issue is currently 'OPEN' and 'Unresolved'.

Not correct

The screenshot shows a Jira issue page for 'PMAX_XRAY / PMAXR-68' titled 'This is a Requirement - Task'. The issue is of type 'Task' with a 'Low' priority. The 'Requirement Status' is 'UNCOVERED'. The 'Test Coverage' section shows 'No Tests were found testing the requirement.' and an 'Add Tests' button. The issue is currently 'OPEN' and 'Unresolved'.

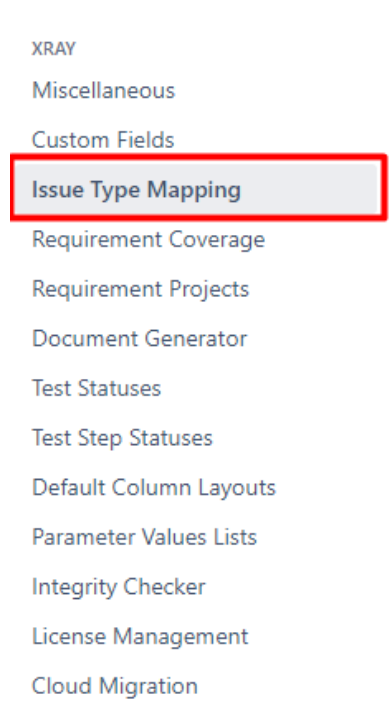

Solution

You need to configure your issue type as a Requirement in the Xray settings:

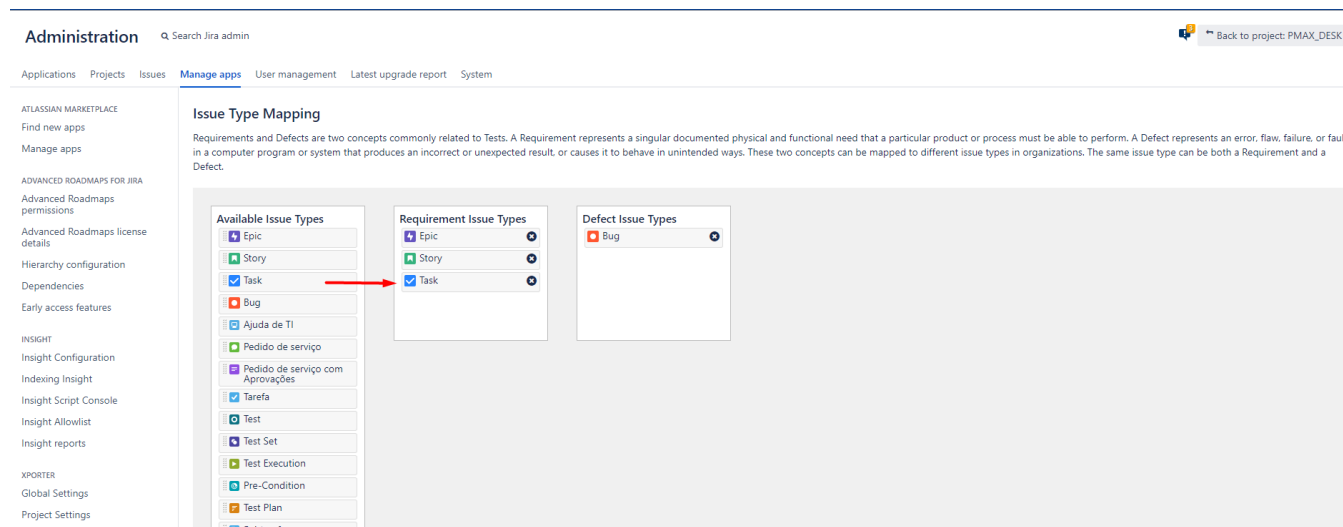

- 1 - Go to Jira Administration
- 2 - Go to Manage apps

3 - Go to Xray

4 - Go to Issue Type Mapping

5 - Drag and drop your issue type from the "Available Issue Types" box to the "Requirement Issue Types" box

6 - Save
