

[Xray Server] Cloning an Execution with over 100 Test Cases Linked

While this operation is completely possible, when you see the "Test Execution Details" tab, you'll encounter the warning that the "Tests" field is not available:

Clone

Project

Issue Type ☒ **Test Execution**

Clone Options ☐ Copy comments
☐ Copy worklogs
☐ Copy watchers

General **Test Execution Details**

Begin Date
The planned start date

End Date
The planned end date

Revision
The system revision for the test execution

Test Environments
Begin typing to find and create labels or press down to select a suggested label.
Each environment where the Test is to be executed

Tests **This field is not available due to its high number of entries (152). Please use the issue view screen to add or remove Tests.**

Test Plan
Associate Test Plans with this Test Execution

☐ Clone another **Create** Cancel

That warning is a field lock that we added because when there are too many associated Tests, editing the field will cause screen blockages and system failures due to response times.

However it will not prevent you from being able to clone the issue, it just doesn't allow you to either add or remove any links.

You will always have that same option in the view screen to be able to add or remove Tests.
