

[Xray Cloud] Xray Default Issue Type Screens missing

Due to Jira Cloud limitations, we are not able to provide you with customization of the screens as we have on the Xray Server. For example, when you create an issue type Test, only after the creation are you able to see the Xray panels, like Test Details (where you can change the Test Type, add Test Steps, etc...)

You may find in our documentation all the details regarding the Custom Fields and Screen configuration on Xray Cloud,

[Custom Fields and Screen Configuration](#)
