

[Xray] How can I set a Test as PASS even if one of the steps failed - and keep that information?

Problem:

I want to run a Test and , even if one of the steps FAIL, i want to mark this test as a PASS and keep the information about the failed steps.

Solution:

With the default settings and options this is not possible as, once you set the it as PASS, Xray will automatically set all steps as PASS.

An alternative way to achieve this is described bellow:

Create a "SKIP" step in the configuration like on the screenshot bellow, you may find instructions about it [here](#) for server or [here](#) for Cloud.

After that, use the SKIP status in the steps you want to ignore/fail/skip:

Test Step Statuses				
Manage custom Test Step statuses for Xray				
Name	Description	Color	Test Status	Operations
PASS	The test step has passed		PASS	
TODO	The test step has not started		TODO	
EXECUTING	The test step is currently being executed		EXECUTING	
FAIL	The test step has failed		FAIL	
SKIP	The test step has been skipped.		PASS	Edit Delete
ABORT			PASS_IGNORE	Edit Delete
IKKE-RELEVANT	Teststeget er ikke relevant for kjøringen		PASS	Edit Delete
Create				

Once the SKIP step status is configured it will show up in the execution of the Tests.
