

June 20, 2020 - Minor Update - v1.1.45-1.012.000

June 20, 2020

The Xray team is proud to announce the release of **Xray Cloud 1.1.45-1.012.000**. This version features Test Run Custom Fields, configurable columns on the Test Runs List report, and embedded images on Test Step text fields.

Starting from this version, all Xray **attachments** will be stored in **Xray servers**. This includes attachments within Test Steps and execution evidence.

Release highlights

Test Run Custom Fields 😊

You can now define additional custom fields for Test Runs. These fields can be useful to add extra information to Test Runs usually only available during or after executing Tests.

Test Run custom fields can be configured by project and by Test Type. Therefore, these settings will not affect other projects within your Jira instance. For example, it is possible to have custom fields just for Manual Tests within a project.

Reporting

The Test Runs List report and gadget can already display Test Run Custom Field values for each Test Run.

Within a Test Execution issue, it is also possible to display Test Run Custom Field **columns** and to **filter** Test Runs by Test Run Custom Field values.

It is now possible to configure the columns on the Test Runs List report. You can include any field from the Test issues, fixed Test Execution fields, or Test Run fields (including the Test Run Custom Fields).

Learn more about this feature [here](#).

Embedded images within Test Step text fields

If you need to embed images or screenshots directly on Test Steps, now you can.

Just copy an image to the clipboard and paste it on a given Test Step field. An attachment will be created automatically on the Test Step, and the image will be placed on the text field. You can then resize and position the image accordingly.

Learn more about this feature [here](#).

Projects / 📖 Book Store / 🖼️ STORE-890

The screenshot displays the 'Execution Domain' interface. On the left, a blue sidebar contains an upward arrow and the number '3'. The main area is titled 'Execution Domain*' and features a 'Browser' tab. Below the tab, the 'Action*' section contains the text 'Press the **Checkout** button to start the checkout process.' To the right of this text, a red box highlights a toolbar with icons for text formatting (Aa, B, I, ...), a color picker, a list icon, a plus icon, and an image icon. Below the image icon, a dropdown menu shows 'image.png'. The main content area displays a screenshot of a web application with a shopping cart icon in the top right corner. A mouse cursor is pointing at the shopping cart icon. Below the screenshot, the 'Data' section is visible, featuring a toolbar with text formatting (Aa, B, I, ...), a color picker, a list icon, a plus icon, and a link icon.

Xray attachment storage

All new attachments will now be stored in Xray servers. This affects all attachments within Test Steps and execution evidence. Therefore, Xray will no longer clog Test and Test Execution issues with attachments.

Only new attachments will be saved into Xray storage. The existing attachments within these issues will not be migrated.

Is there a storage limit?

Yes. The storage limit is 50GB per Xray instance.

The storage limits are not currently enforced. If your Xray installation exceeds the storage limit, we won't cancel your subscriptions or remove any data, as long as usage is in accordance with our [acceptable use policy](#).

Keep in mind we're planning to enforce storage limits soon. We'll let you know ahead of time in case you want to upgrade.

Just one more, yet important, thing...

Documentation is always important and sometimes you may miss it. We added a set of relevant articles to our already extensive documentation.

In this release, you will find some specific [tutorials related to performance and load testing](#), including our recent partnership with the well-known load testing tool [NeoLoad](#). We've also added a long-awaited tutorial for [JMeter](#) and another for [Taurus](#).

An extensive tutorial for [Serenity BDD](#) is also available.

Here's a sum-up of all the relevant articles that we've added:

- **Integrations / Partnerships**
 - [Integration with NeoLoad](#) (load testing)
- **Tutorials with automation tools & frameworks**
 - [Testing using Serenity BDD and Cucumber in Java](#)
 - [TTT: Performance and Load Testing](#)
 - [Performance and load testing with JMeter](#)
 - [Load testing and functional testing with Taurus](#)
