Configuring Test Run Custom Fields

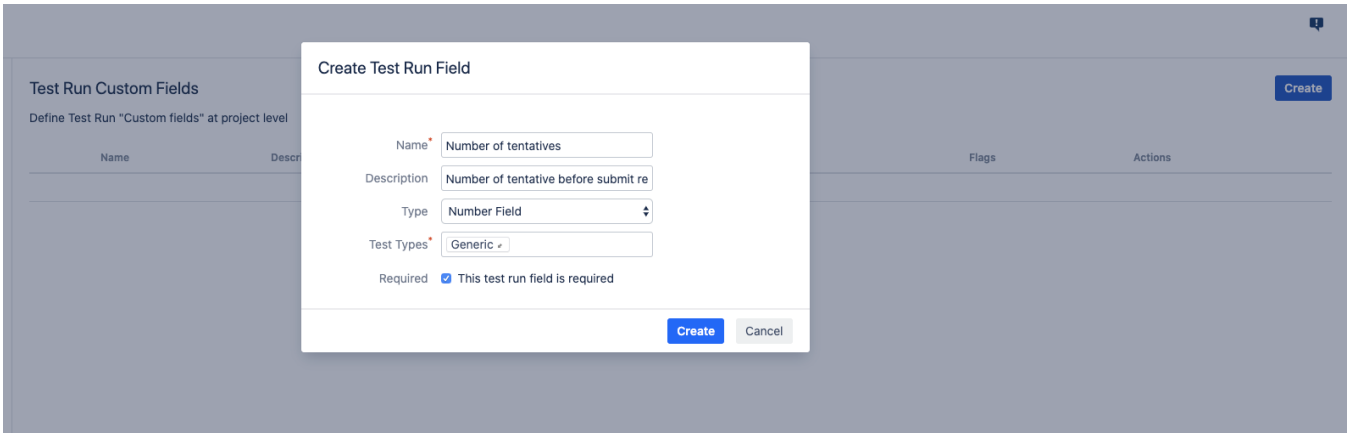
Xray allows Project Managers to configure fields to be filled when executing a Test

- Custom fields
  - Create
  - Mandatory fields
  - Type of fields Available
  - Actions available
- Limit of Fields
- Impact of configuration changes on existing executions of Tests

Custom fields

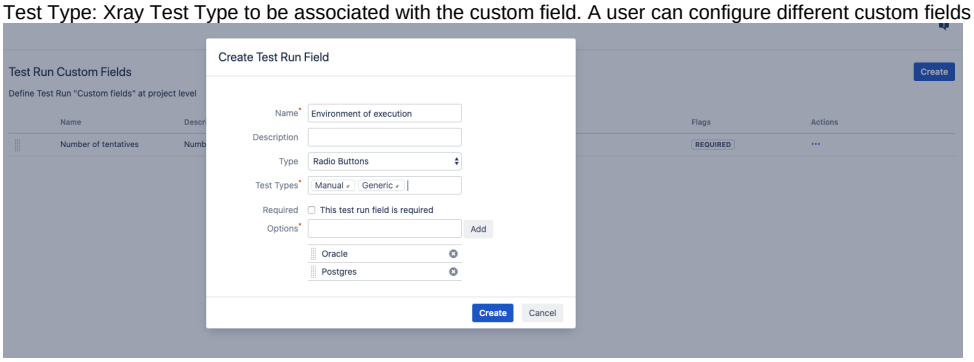
Create

A project manager can create custom fields to be available when executing Tests



Mandatory fields

- Name: a unique name for custom field
- Test Type: Xray Test Type to be associated with the custom field. A user can configure different custom fields for different Test Types



Type of fields Available

Available **step fields**:

- Toggle
- Date Picker
- Date Picker
- Number field
- Radio button
- Select lists (single choice and multi choices)
- Text field (single and multi-line)
- User Picker

Actions available

Custom fields can be:

- edited
- set as required/optional
- deleted

Limit of Fields

- From version 4.0.0 to 4.1.x Xray allows up to 3 fields for each type of Test.
- As of version 4.2.0 the maximum allowed is 12 fields for each type of Test.

Impact of configuration changes on existing executions of Tests

Please be aware that a change on a custom field that is being used in a Test already being executed may request an action to reset or merge the test definition: Updating the definition of the Test after execution started
