FilterJQL & FilterName

ⓘ This only works when the export is made via the **Export** menu on the Issue Navigator screen.

Document Generator also allows you to render the FilterJQL and the FilterName used to search Issues on the Issue Navigator screen.

Definition:

```
${FilterJQL}

${FilterName}
```

Filter

You can now work with the filters you have defined on your Jira instance.
If you want to get the JQL statement, simply map:

```
${filter:<Filter name> or <Filter ID>}
```
