Adding Requirement Status on the agile board

ⓘ The status of a requirement tells you information about its current state, from a quality perspective. Is it covered with test cases? If so, has it been validated successfully? In which version?

In Xray, for a given requirement, considering the default settings, its coverage status may be:

- OK – requirement has been successfully and fully validated; all the Tests associated with the Requirement are PASSED
- NOK – requirement is unsuccessfully validated; at least one Test associated with the Requirement is FAILED
- NOTRUN – requirement has not been validated completely; at least one Test associated with the Requirement is TODO or ABORTED and there are no Tests with status FAILED
- UNKNOWN – requirement is in unknown state; at least one Test associated with the Requirement is UNKNOWN and there are no Tests with status FAILED
- UNCOVERED – requirement is not covered with tests; the Requirement has no Tests associated to it

① Add Requirement Status to the Board

Go to the Project side Bar > Select Backlog or Active Sprint > Board > Configure.

[blocked URL]

Click the **Card Layout** and add the **Requirement Status** to the **Backlog** or/and **Active Sprint**.

[blocked URL]

✓ Adding Requirement Status is good for your testing teams because it provides a quick overview of the current statuses of the requirement issues.

You can make this field available in the Backlog and Active Sprint view.

② Check the result

1. Backlog View

   [blocked URL]

2. Active Sprint View

   [blocked URL]

Now your team can easily see the requirement status from the quality perspective.

⚠ Note that you are limited on the number of fields (3) you're able to include in each card on the board.
