

[Xray] Using the Jenkins task to export cucumber feature files, the directory is not being created in the Jenkins workspace and the feature files are not being exported

In the Console output, there are no errors when exporting feature files, however the folder that was specified in the Jenkins task is not being created in the Jenkins workspace and any feature file is being generated.

```
Starting XRAY: Cucumber Features Export Task...
#####
#### Xray is exporting the feature files ####
#####
Issues: PSXRAY-58;PSXRAY-59;PSXRAY-60;PSXRAY-61;PSXRAY-69
Will save the feature files in: /feature
##### Unzipping file #####
##### Unzipped file #####
Successfully exported the Cucumber features
XRAY_ISSUES_MODIFIED:
XRAY_IS_REQUEST_SUCCESSFUL: true
XRAY_RAW_RESPONSE:
XRAY_TEST_EXECS:
XRAY_TESTS:
```

If the folder/directory specified doesn't exist it will be created automatically during the export process. However, it needs to be properly formatted, starting with "."

Example:

The screenshot shows the Jenkins configuration interface for the 'Xray: Cucumber Features Export Task'. The 'File Path' field is set to '/feature', which is highlighted with a red arrow. The 'Jira Instance' is 'Docker7221' and 'Issues' are 'CALC-1196'. There are help icons for the 'Issues', 'Filter', and 'File Path' fields. A link 'Click here for more details' is visible below the 'File Path' field. The 'Post-build Actions' section is also visible.
