

# Importing tests from HP ALM/QC

Xray v3.0 has a [basic](#) built-in tests importer for HP ALM/QC v12.5x.

You can import test cases from HP ALM's "Test Plan" (not in any way related with Xray's Test Plan issue) by using HP ALM's REST API.

The current implementation is essentially limited to importing manual test specifications, their steps and their attachments.

- [Features and Limitations](#)
- [How to use](#)

## Features and Limitations

Supported Features	Unsupported
<ul style="list-style-type: none"><li>• import Test case specification from HP ALM's "Test Plan"<ul style="list-style-type: none"><li>◦ tests without parameters</li><li>◦ tests without called steps</li><li>◦ tests that are not marked as "templates"</li><li>◦ tests of type "MANUAL"</li></ul></li><li>• import Test attachments and Test step-level attachments</li><li>• import formatted Test description</li><li>• hierarchical organization information from ALM/QC's "Test Plan"</li></ul>	<ul style="list-style-type: none"><li>• tests whose type is not "MANUAL"</li><li>• tests with parameters</li><li>• tests with called steps</li><li>• tests that marked as being "templates"</li><li>• defects and requirements</li><li>• links to defects/requirements</li><li>• test runs</li><li>• Test Lab-related information (tests, runs, etc.)</li></ul>

**Please note**

The current importer is relatively basic. If you need to migrate more information and have further control over the migrated data, we recommend you contact an Atlassian partner with expertise on this kind of migrations. Note that migrating "all" information may be a complex process to implement and some things may not be mappable at all.

**Please note**

- The steps information from HP ALM/QC is saved in HTML which is only convertible to Jira's wiki markup from Jira 7.2 and later. In Jira version below 7.2, the steps are shown with HTML markup.
- In order to import Tests, the Test issues cannot have required fields in Jira; you must set them as optional before starting the import process.

## How to use

Suppose you have a project in HP ALM (see above for supported version/s) and you wish to import the tests from HP ALM's "Test Plan", as seen below:

To start the importation process:

1. Log in with an administrator account.
2. Go to System>Import and Export>External System Import.
3. Select Xray's **HP ALM/QC Importer**.

### Please note

When you click Next, the connection is validated. If the connection fails, an error message is shown and you won't be able to proceed with the importation process.

Failed to connect to HP QC/ALM.

Upon a successful connection, you need to choose the project in which you want the Test issues to be created.

Configuration

A label can be associated to issues created while importing HP QC/ALM. For that, fill the next text field.

Label

Hierarchical Test Organization ☒ Import to Test Repository

By selecting this option, Folders will be created in the Test Repository and the imported Tests will be moved to those folders to match the hierarquical structure in HP QC/ALM.

Test Repository Path

Select to which Test Repository folder you would like to import the HP QC/ALM folder structure.

HP QC Folder

Select a specific folder from your HP QC host to import. Only the specified folder and its subfolders, and test contained in them will be imported. The folder path must be specied in the format "Parent Folder/Child Folder"

Next

Back

#### Configuration options:

- **Label:** a unique label to add to the Test issues that will be created so these can be quickly found afterwards
- **Hierarchical Test Organization:** migrate hierarchical information from HP ALM/QC's "Test Plan" to Xray's Test Repository. Folders will be created, if needed, in the Test Repository and Tests will be moved to the folders.

#### Please note

To have this option available, you must be able to, at least, access the target project (i.e., browse permission), the [Hierarchical Test Organization](#) must be enabled in Xray settings, and:

- have one of the project roles configured on the default Xray global permission for the [Hierarchical Test Organization](#) in Xray settings.
- Or
- have the [Create folders](#) and [Move issues](#) user [Xray Test Repository Permissions](#) configured on the Project Permission Scheme of the target project

- **Test Repository Path:** the base Test Repository folder where ALM/QC's "Test Plan" hierarchical structured will be copied into. If "All" is selected, then the structure will be created in root of the Test Repository - this field is only displayed if the **Hierarchical Test Organization** option is checked.
- **HP QC Folder:** the base folder where to import Tests from. Only the specified ALM/QC's "Test Plan" folder and its subfolders, along with respective Test cases, will be imported. Folder path must be specified in the format "/Parent Folder/Child Folder"; leave it empty to import all folders. In the case of folders with similar names, make sure to use the full path of the folder. For instance, having 2 folders with the following paths (1: /base\_folder, 2: /automated/base\_folder), make sure to use full path in this field (/base\_folder or /automated/base\_folder)

We recommend using a unique label with numbers to assign the Test issues that will be created. This may be quite useful if you need a quick way to identify the newly created issues. The label syntax is restricted in the same way as label fields in Jira.

A final confirmation dialog presents information about the total number of Tests that will be imported.

This number may be lower than the actual number of Test issues that will be created; this occurs because Xray will only be able to import some of the tests, depending on their characteristics which can only be determined during the actual importation.

# Confirmation

## Confirmation

We found 7 potential tests in project test\_project in domain TEST\_DOMAIN. Do you want to migrate the compatible ones?

[Begin Import](#) [Back](#)

At the end, a brief summary is shown mentioning the total number of Test issues created and any warnings that occurred during the process.

 3 tests were imported successfully!

**Import completed with 1 warnings:**

- HP QC/ALM Test with id 16 has Description blank.

What now?

You can download a detailed log [here](#).

View recently created [Issues](#).

[Import another project](#).

From this screen, you can also see the list of created issues based on the label you provided. You can also consult the detailed logs about the process.
