

# Configuring a Jira project to be used as a Requirements project

When you purchase or try Xray, often you already have one or more projects you're working on and you want to test. Xray provides the ability to add Requirement Coverage analysis to your requirement project without having to couple any issue types or make extra configurations.

In order to enable the [Requirement Status](#) Custom field in your Requirement Issues and Requirement Coverage Panel in [Project Panel](#), follow these simple instructions.

- [Enable Xray Requirement Coverage using the Project Administration Page](#)
- [Enable Xray Requirement Coverage using the Xray Administration Page](#)

## Enable Xray Requirement Coverage using the Project Administration Page

In order to enable the Xray Requirement Coverage Components, click on Actions -> **Enable Xray Requirement Coverage**

The screenshot shows the Jira Project Administration page for a project named 'Amazing Addon Website'. The project details at the top include Key: AAW, Lead: admin, Project type: Software, Category: None, and URL: No URL. The 'Actions' dropdown menu is open, and the option 'Enable Xray Requirement Coverage' is highlighted in red. The page is divided into several sections: Summary, Issue types, Versions, Components, Roles, Permissions, and Notifications. The 'Issue types' section shows a list of issue types: Bug, Epic, Improvement, New Feature, Sub-task, Task, and Test. The 'Versions' section shows that the project has no archived versions. The 'Components' section shows that the project does not use any components. The 'Roles' section shows the Project Lead as admin and the Default Assignee as Unassigned. The 'Permissions' section shows the Scheme as Default software scheme and Issues as None. The 'Notifications' section shows that Jira can notify the appropriate people of particular events in your project.

## Enable Xray Requirement Coverage using the Xray Administration Page

In order to enable the Xray Requirement Coverage Components to multiple projects, go to Manage Add-Ons -> Xray for JIRA -> Requirements Projects. Add or remove any project as needed.
