

[Xray Server] How to add Tests to a Structure

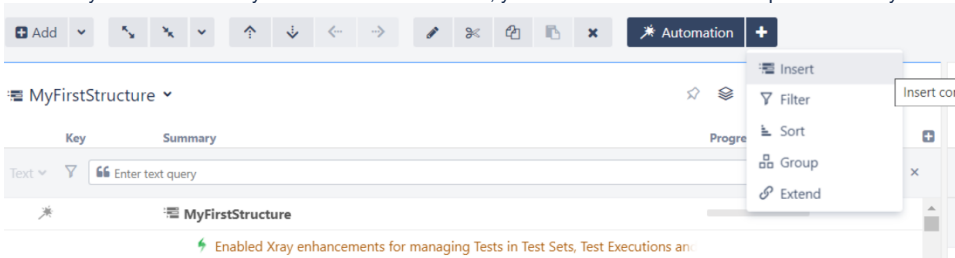

Context

This [link](#) shows us how to create an integration between Xray and Structure add-on.

In this article, you will find how to add your tests to a Structure, a step by step guide.

Step-by-step guide

1. Follow this [link](#) to create an integration.
2. Now that you added the Xray Extender to the Structure, you can use this Automation options to add your tests

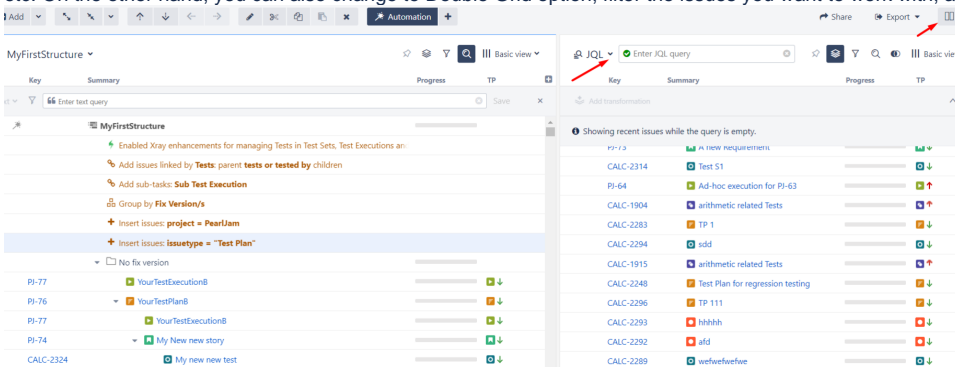

For instance, you can Insert Tests by

a JQL:

A screenshot of the 'Insert JQL Query' dialog box. It contains the following fields: 'Runs As' with a user icon and the name 'Bruce Wayne'; 'JQL Query' with the text 'project = Calculator and issuetype = "Test Plan" and labels = xpto2'; and 'Limit' with the value '1000'. Below the limit field is the text 'Maximum number of issues to insert (leave empty for no limit)'. At the bottom right are 'Apply' and 'Cancel' buttons.

3. And on this automation option, you can also perform actions to the organization you already have: group by some custom field, filter issues, etc. On the other hand, you can also change to Double Grid option, filter the issues you want to work with, and drag and drop to your Structure.
