

Continuous Integration Tools

Xray supports integration with Continuous Integration tools, thanks to its [REST API](#).

For some tools (e.g. [Bamboo](#), [Jenkins](#)), our team provides add-ons that you can use to easily setup your CI/CD pipeline. These add-ons interact with our public REST API.

If you're using another CI tool, you can still easily integrate with Xray. The [Integration with TeamCity](#) page is a good example, where you're able to see how easy is to submit automated test results for different automation frameworks supported by Xray.
