

About Xray Exploratory App

The Xray Exploratory App is a tool designed for Exploratory Testing, consisting of two primary components, a Desktop Application and a Web Console. The Desktop Application works seamlessly as a stand-alone app or integrated with Xray and Jira, and the Web Console allows you to register as a user, manage your test sessions, and your team workspaces.

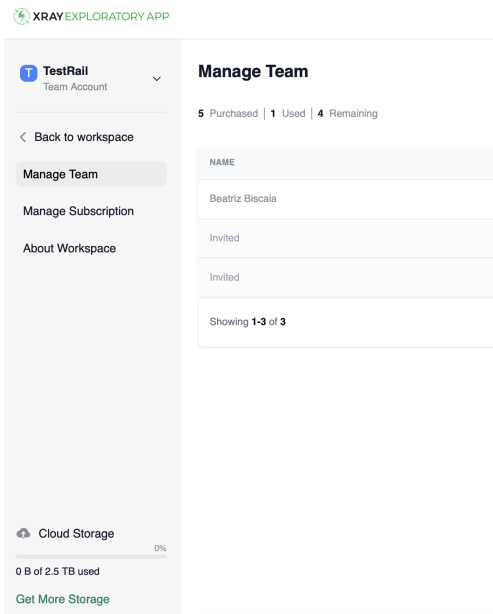

The following section lists some of the main features of these two components:

Xray Exploratory App Desktop Application

The Xray Exploratory App Desktop Application helps testers to perform and complete exploratory testing. It offers the following features:

- Create new generic tests on Xray
- Define new exploratory testing sessions
- Execute sessions for existing tests (generic and manual)
- Record videos and audio, capture screenshots, take notes, and upload files to save them on their session

Xray Exploratory App Web Console

The Xray Exploratory App Web Console is designed to help users organize their sessions and charters, and administrators manage their teams and subscription.

- Organize users, test sessions, and charters in cloud workspaces
- Create and upgrade accounts
- Add and remove users to accounts
- Download the desktop app

- Upload test evidences and reports to Xray

Xray Exploratory App works integrated with Jira and Xray but can also be used in standalone mode (Jira and Xray are not required). Learn more about the differences at: [Xray Exploratory App Desktop Application](#)

Xray Exploratory App is provided in four tiers, as illustrated in the following table:

	Free	Team	Enterprise	Custom
Members of account	1	Up to 5	Up to 10	More than 10
Collaboration	✗	✓	✓	✓
Cloud storage per workspace	10 GB	2.5 TB	5 TB	Custom
