

Global Settings

Xray's global settings are configured in **Settings > Apps > Xray**.

The screenshot shows the Jira Software Global Settings page. On the left, under the 'Settings' sidebar, the 'Apps' section is highlighted with a red box. This section contains various configuration options for Xray, such as Miscellaneous, Test Types, Test Environments, Parameter Value Lists, Document Generator, Test Statuses, Test Step Statuses, Cucumber, Test Run Archiving, API Keys, Migrations, Backup and Storage, and Health Check. On the right, the main content area displays the 'XRAY' configuration page, which includes sections for Miscellaneous, Test Types, Test Environments, Parameter Value Lists, Document Generator, Test Statuses, Test Step Statuses, Cucumber, Test Run Archiving, API Keys, Migrations, Backup and Storage, and Health Check.

The following setting sections are provided:

- **Miscellaneous:** general settings for Xray;
- **Test Types:** configure custom Test Types;
- **Test Environments:** configure global Test Environments;
- **BDD Step Libraries:** define Global Libraries that can be shared across projects;
- **Parameter value lists:** to define generic lists of values that can be referenced in datasets in Xray;
- **Test Statuses:** configure custom Test Run statuses for Xray;
- **Test Step Statuses:** configure custom Test Step statuses for Xray;
- **Default Column Layouts:** configure your Xray license provided by Xblend Add-ons;
- **Cucumber:** configure specific settings related to how Cucumber tests are handled;
- **API Keys:** generate and configure API keys to be used in the REST API;
- **Migrations:** to check the status for ongoing migrations and manage the previous migrations of Xray from Server to Cloud;
- **Backup:** generate and download a backup of the Xray data;
- **Health Check:** verify the configuration status of Xray.
